

TDM : TDMCreate 1.0 - Modules

NEWS_PDF_AUTHOR: kraven30

NEWS_PDF_DATE: 2009/7/17 10:57:43

[size=xx-large]TDMCreate[/size]

TDM is pleased to present TDMCreate, a module for creating modules.
The module was created to save time on coding that is repetitive (eg classes)
for the moment, the module can doing the following:

- Creation of the administration
- Creation of classes
- Synch mysql.sql
- Creation of xoopsversion.php
- Creation of language files
- Creation of blocks with templates
- Global search over xoops
- Creation of a header for all php files

I do not think we will integrate the automatic construction of user code, it varies greatly on each module or there is a little code to be generated.

Use this module only locally.

The module has been tested on Xoops 2.3.3 but should run under Xoops 2.0.18.

I use the admin theme : EXM

The module is licensed under the GPL.

the module is available in 3 languages: English, French and Arabic (Thx Mariane for translation)

Movie : [ici](#)

You can download it at : [ici](#)

You have found a bug : [ici](#)

You have ideas for improvements : [ici](#)
