

Redirector 1.00 - Modules

NEWS_PDF_AUTHOR: wishcraft

NEWS_PDF_DATE: 2009/7/31 5:26:58

Redirector 1.00 is a redirection module that allows for various Xoops User and module information to be pertained to support a redirection type. It uses a post load in the mainfile for people to allow for redirection types of 301, 302, IFrame and others. It can be extended to support plenty of details.

Redirector later will be combined to get data from the WURFL module, this will allow for any mobile service to be defined to certain areas on your domain.

If you wish to define various variable redirector will place people in the correct subdomains as per its multisite support. It will run without multisite but will certainly allow for many other options to be extended into it's system.
