From [Hispaxoops](#) & [Celseven](#), we launch a little hack to help users with cache files deletion.

It's a code implementation over Xoops called xDelCache, it deletes smarty_compile folder content & create an index.html file again.

If you need a fast way to delete it, we think this one more right way to do.

Many thanks to [Celseven](#) & hope all community could find useful this hack (maybe will be implemented on a future versions of Xoops?).
