[size=x-large]Xurl[/size]

Designburo.nl is proud to announce the immediate release of the Xurl for XOOPS.

About the module

- > ETT Xurl Module is a XOOPS CMS module used to shorten long urls for use in e.g. Twitter.
- > ETT Xurl Module can shorten urls back to the root of your website, or use a separate domain/service.
- > ETT Xurl Module can sanitize urls in complete texts, ready to be posted on e.g. Twitter.
- > ETT Xurl Module can restrict clicking on a shortened URL if a user is not registered to your XOOPS website.
- > ETT Xurl Module function can be included for use in other modules (e.g. a RSS feed creator, chatbox or Twitter poster).
- > ETT Xurl Module keeps score on how many hits an url has.
- > ETT Xurl Module can be setup to receive an URL shorting request from other websites.
- > ETT Xurl Module is fairly easy to setup and the module is well documented.

Thanks to Trabis for keep sending me (Charly) into the right direction!
