

Defacer 1.0 Final - Modules

NEWS_PDF_AUTHOR: trabis

NEWS_PDF_DATE: 2009/9/6 23:30:00

I'm pleased to release Defacer 1.0 Final. Defacer is a new revolutionary XOOPS module that allows you to change themes, metadata and permissions for any given page on the XOOPS-based Website, thus giving you a level of control and customization not seen before.

It also comes with [jgrowl](#) redirection system (XOOPS 2.4 only) and the ability of using blocks anywhere in your theme and templates(XOOPS 2.4 only)

Requirements

=====

Works in 2.4.x, xoops 2.3.x, xoops 2.2.x, xoops 2.0.18 & up

Others XOOPS versions were not tested.

This version is **PHP5 only**.

If you are using XOOPS version
Follow the instructions in readme.txt
