

Release of Indexscan 1.0 - Modules

NEWS\_PDF\_AUTHOR: culex

NEWS\_PDF\_DATE: 2009/9/10 20:30:00

Indexscan 1.0 has now been released.

Indexscan scans your webfolders to see if you have folders without index files. Should it find a folder without index.html, index.htm, index.php or index.php3 it prints out the location and you can then decide weather to manually place a new or use the automatic create link and automaticly create index.html files in all folders that are missing.

The tool is only accessable through admin in your site.
