
Watermark Hack for Xoops Core Imagemanager - Hacks

Posted by: optikool

Posted on: : 2009/10/8 7:40:00

This is a hack to xoops 2.3.3 which gives you the ability to add a watermark to images that you upload through the image manager.

The name of your watermark should be watermark.png and it should be located under uploads... /uploads/watermark.png. Replace the files located in the zip file with the files in your Xoops installation.

Thanks to Mowaffaq Ali at www.arabxoops.com for making a donation to this project. Please post your suggestions and feedback Xoops Forums or at my [website](#)
