

debaser 3.04 Half Finished released! - Modules

NEWS_PDF_AUTHOR: frankblack

NEWS_PDF_DATE: 2009/11/20 19:30:00

After 256 downloads of the Half Baked-release and NO bug reports I am proud to announce the release of debaser 3.04 Half Finished. In my own nomenclatura Half Finished means BETA.

Maybe I said this before, but what is in the package?

- 1) Add multilingual description with no extra markup (the module xlanguage is needed)
- 2) Ajax search function which makes suggests for search terms
- 3) Inner display of players or popups
- 4) Public and private playlists
- 5) Re-encoding of MP3 with Lame (have to be installed separately)
- 6) Batch processing of files
- 7) Flash uploader with progress bar and timer
- 8) Administration for radio and tv stations
- 9) Per-user-directories with quota or no quota
- 10) Code embedding for other websites
- 11) Support for nearly all players also from websites like YouTube, clipfish etc. Even external players can be added
- 12) File manager is included
- 13) Script for detailed (underestimating) information added
- 14) Upgrade script from debaser 0.92x to debaser 3.04 Half Finished. No upgrade from alpha or pre-alpha! Read carefully the release notes for the upgrader on dev.xoops.org or displayed on the upgrade script page
- 15) and tons of blocks and other features I forgot to mention

Bad news as well: You have to turn on javascript to make debaser 3.04 Half Finished work properly. I kicked out some WYSIWYG editors, right now only tinyMCE and CKEditor are supported. 3.04 is meant only for XOOPS 2.3 and 2.4, but the module could! work for the 2.0-series.
