Language problem with comments - Hacks

The Websites are quite often criticized that the authors of programs or other systems do not consider a different language than their own. So different numbers are displayed correctly in the original language, but in other languages they appear strange.

For example, if the original module is able to distinguish only one or more comments, it's a problem, as the translation results in: "Pocet komentaru: 3" instead of the correct "3 komentare" (Examples are given for the Czech language).

For my server, I adjusted the News module as follows:

File **language/YOUR_LANGUAGE/main.php**:

```
define("_NW_NUMCOMMENTS","%s komentare");
```

change to:

```
define("_NW_NUMCOMMENTS2","%s komentare"); // 2 - 4 comments
define("_NW_NUMCOMMENTS5","%s komentaru"); // more than 4 comments
```

File **class/class.newsstory.php**:

```
if (XOOPS_COMMENT_APPROVENONE != $xoopsModuleConfig['com_rule'])
{
$ccount = $this->comments();
$morelink .= ''._NW_READMORE.' | '.$morelink2.'">'._NW_ONECOMMENT.'';
}
else
{
$morelink .= '">'._NW_READMORE.' | '.$morelink2.'">';
$morelink .= sprintf(_NW_NUMCOMMENTS, $ccount);
$morelink .= '';
}
}
```

```
else
{
if ( $ccount == 1 )
{
$morelink .= '">'._NW_ONECOMMENT.'';
}
else
{
$morelink .= '">';
$morelink .= sprintf(_NW_NUMCOMMENTS, $ccount);
$morelink .= '';
}
}
}
}
```

change to:

```
 if (XOOPS_COMMENT_APPROVENONE != $xoopsModuleConfig['com_rule'])
{
$ccount = $this->comments();
$morelink .= '._NW_READMORE.' | '.$morelink2.'">'._NW_ONECOMMENT.'';
}
else
{
if (( $ccount >1 ) && ( $ccount 1 ) && ( $ccount
```
