### Multisite Install Guide

If you are looking for an install guide cause a few people have been asking for one, I have written one which applies to previous versions and standard versions.

This code will run with the module installed or not, it covers installation with [XOOPS 2.3.x](#), XOOPS 2.4.x as well as Multiple domain hacks for the mainfile.php modifications as well as other changes to the core functions of the module.

Check the [Multisite 1.30 Wiki](#) Entry
