

## Interview of Ricardo Costa (Trabis) by Russian users of XOOPS - XOOPS

NEWS\_PDF\_AUTHOR: omeech

NEWS\_PDF\_DATE: 2010/1/19 22:50:00

Recently the [XOOPS Russian Support](#) site interviewed Trabis (Ricardo Costa). Here is the English translation:

Dear Ricardo!

Russia's XOOPS users congratulate you on joining the XOOPS Council. In this regard, let me ask you a few questions about how you see the development of XOOPS in Russia's.

### **1. Starting with version 2.4 of XOOPS we have a license key - will it affect the accessibility and free availability of XOOPS in future?**

Re: No. License is just a number (hash) that uniquely identifies your XOOPS instalation. It is a feature for module developers, it does not affect the accessibility and free availability of XOOPS.

### **2. Because of peculiarities of the Russian language, many users are accustomed to the encoding win-1251 (cp-1251) and many avoid UTF-8. How do you see the UTF-8 within XOOPS - is it here to stay?**

Re: I'm also used to use latin1 but in the future XOOPS will only support utf-8. I recommend you to translate and encorage your users to use UTF-8.

### **3. It's no secret that Russian support for XOOPS leaves much to be desired. Currently, work is underway on the project resuscitation of [www.XOOPS2.ru](#), creating new projects: [XOOPS-ORG.ru](#), [MYXOOPS.ru](#) etc. What do you think, we need to create strong community of XOOPS in Russia, as well as to attract more users, developers and designers?**

Re: I think that you should have only ONE support site for Russian users. I don't know how you can engage users to USE XOOPS. As Mamba says: "don't ask what Xoops can do for you, ask what you can do for Xoops". The important is keeping support alive and provide translations for modules, core and XOOPS.org news.

### **4. On Google Code you created a SVN-repository XUUPS - what is it connected? Is SourceForge not enough?**

Re: Xuups is a private project and it is not related with XOOPS directly. I use google code because it is easier to create new packages.

**5. How much do you recommend the creation of a public SVN for the development of joint projects?**

Re: I think module developers should learn to work as team and that having a common repository would be great for XOOPS. We will create a SVN for maintaining official modules, we need to work together in modules such as CBB, article, tags, profile, mylinks, mydownloads, etc.

**6. Many people like the blocks manager in version 2.5 PreAlpha. What other innovations can we expect?**

Re: I'm not lead developer for 2.5.x series but I believe 2.5 will not have more innovations beside the System module. The 2.5 main focus is to move code to PHP5. Features will come in 2.6 and/or 3.0.

**7. Modules of the French developers of TDM have nice graphical Administrative User Interface in the style of Joomla - will it become standard for all modules of XOOPS?**

Re: It would be nice to provide module developers a greater Framework. We need classes for creating breadcrumbs, admin menu, about pages, etc, etc. But this is not on 2.5 roadmap.

**8. When do you expect to release Publisher?**

Re: I believe we will release an alpha this month.

**9. What wishes and advises would you have for the XOOPS Russian community?**

Re: I just wish you good luck, I'm also trying to set up a Portuguese support site and I'm not the best person to advise how to do it!

**Ricardo, thanks for your time. Your opinion is very valuable to us.**

Re: No problem, thanks for asking!
