

Article Management System (AMS) 3.00 SEO Beta 1 Released ! - Modules

NEWS_PDF_AUTHOR: NovaSmart

NEWS_PDF_DATE: 2010/2/19 7:50:00

[NovaSmart Technology](#) proudly announce [Article Management System \(AMS\) 3.00 Beta 1](#) to be released to the public.

NovaSmart need your help to provide your local translation or update from AMS 2.52 translation, so we could incorporate local translation directly in FINAL version. To ease your effort, AMS 3.00 Beta 1 include Dutch, German, Spanish that up to date to AMS 2.52 and need your help to add a few translation to make it compatible with AMS 3.00

This release consider NOT STABLE and NOT RECOMMENDED for production site.

Whats New In AMS 3.00 :

AMS 3.00 is a major release, specifically targeted to improve Search Engine Optimization (SEO) in AMS, so the article published in AMS will get higher ranking in search engine and improve relevancy. AMS 3.00 incorporate with flexible and powerful SEF (Search Engine Friendly) URL that never seen in any XOOPS publishing module such as able to relocate the article to the root, custom path, incorporate subtopic & audience in URL. Subsequence AMS 3.xx release will gradually implement other SEO technique like SEF for topics, custom tag and meta data in order to maximize relevancy.

What Is AMS

AMS is a highly modified version of the News 1.2 for Xoops, and adds a huge amount of features to give the webmasters a lot more control over their content while still maintaining an easy to understand and use interface. AMS is highly scalable, and is geared towards performance, and as such is well suited to large article repositories that attract high amounts of users.

Whats New In AMS 2.52 Final:

AMS 2.52 incorporate all AMS 2.51 features with improved stability. Thats mean, it more intelligent to see if all required library needed installed and it will disabled certain features if error occur instead of giving blank screen.

Whats New In AMS 2.51 Final:

With this release, user will have new experience in submitting and editing articles with 3 best wysiwyg editors (FCK Editor, TinyMCE and Koivi) and built-in xoops editor. User also now have ability to choose whatever editor they like straight from the edit/compose form without admin intervention. For admin, they have full right to enable this feature and even to choose which

editor they want to be available to user.

User also able to add new spotlight template painlessly, can attach template preview image and given access to the template variable manipulation through php script attached with the template. Simply put the template, template script, preview image accordingly and update/install the module, everything will be auto detect and setup accordingly.

Please note, AMS 2.51 Final is now 100% compatible with XOOPS 2.3 and some graphic had been refreshed.

Fresh Installation

- 1) Just unzip package and copy to your xoops folder
- 2) Click administrator->system admin->modules
- 3) Click on AMS icon to install

How To Upgrade

- 1)click administrator->system admin->modules->AMS update (for XOOPS, it is box with green dot)
- 2)do that one more time (must): click administrator->system admin->modules->AMS update (for XOOPS, it is box with green dot)
- 3)go to administrator->AMS->preference. If you already have XOOPS EDITOR and phpp Framework, just press submit without changing anything (it is a MUST to update the database).
- 4)If you don't have XOOPS EDITOR please change this:
EDITOR : change to DHTML
EDITOR CHOICES : select DHTML only
ENABLE EDITOR CHOICE TO USER : No (just for to be safe. Not really needed)
Then press submit.
- 5) Clear your_xoops/cache, your_xoops/templates_c and your_xoops/xoops_data/caches (Xoops 2.3.x only)

History

Development of AMS started by it-hq.org before hand over to NovaSmart Technology later on.

The motivation behind AMS development is to produce Article management which is specially optimized for speed and ease the admin/article contributor job. Each feature added with performance in mind.

As a result, AMS is the best balance between good features and performance for large articles website compared to other XOOPS article modules. [Read the detail study here](#)

AMS actively develop by it-hq.org until 2005 before abandon. The development of AMS only takeover by NovaSmart and actively develop there start from middle 2007.

Features

Search Engine Friendly : Your article now could be displays in human readable URL.

Eg: <http://www.a.com/modules/AMS/article.php?storyid=1> =>

<http://www.a.com/water/deep-water-animal-op1id1pg0.htm>

WYSIWYG XOOPS editor integration : Your choice of using the default Xoops editor or any editor provided by XOOPS editor; selectable via AMS preferences and submission form (FCKeditor, Koivi, TinyMCE, etc).

NOTE: You MUST install [XOOPS editor](#) separately before this feature can be used and for XOOPSCUBE & XOOPS 2.0 you need the [XOOPS Framework 1.35](#)

Advanced Spotlight management : Choose your AMS spotlight block layout from 6 different template layouts, and add unlimited spotlight blocks with the option to display article mini stats including total articles, total article reads and total article comments. The all new spotlight block administration area allows you to configure exactly how and where to display your AMS spotlight item. From here you can add new spotlight items, selecting the latest article, the latest article in a topic, a specific article, or use the custom setting to display an image or banner using straight HTML code. You can also set things such as what image to display, wether to use an auto or manual teaser, how many characters the auto teaser should display, what text a manual teaser should contain, whether to display the spotlight item in the spotlight block or not, and item weighting where the lowest weighted item is treated as the main spotlight item.

Complete migration and upgrade script : This script enables you to migrate all content, permissions and comments from all presently released version of the News module. It also enables you to upgrade from AMS 2.2.

View by topic revamped : The view by topic view has undergone a huge overhaul and now presents itself with much more emphasis on navigation via topic and sub-topic.

New breadcrumb navigation system: viewable in the topic and article views for easier browsing.

Topics Manager : Topics manager now has a topic weighting system so you can set the listing order when using the view by topic mode.

Article image selection : You can now select to display the user avatar in addition to the topic or no image when viewing an article.

Article versioning system : allowing you to maintain several versions of the same article of which any one can be edited, deleted or set as the active article at anytime

Banner management with inheritance system : so you can enter banner code to be displayed at a topic, subtopic and article level

Searchable article ID system: for knowledge base like article reference * Article linking to any item within your own site as well as any external web resource with link hit counter visible only to site webmasters

Link topics to any CBB/NewBB 2 forum: which when set displays a 'discuss' button at the bottom of each article under that topic

Blocks listing: most read, most popular and most active authors displayed as an average or as a total. Each block with built in article spotlight feature in one or two column format

Article information header: which gives you author, audience, published date, version number, article ID and read counter at the top of each article

Powerful article management admin console: that displays all articles vital statistics, has powerful filtering, searching and sorting functionality, and gives you access to all the administrative functions you need all in one spot

Audience level system: allows you to specify what groups are able to read the extended article text of each article

All the features of the News 1.2 Module

Compatibility

XOOPS 2.0.x

XOOPS 2.2.x

XOOPS 2.3.x

XOOPS 2.4.x

????? 1.2.x

XOOPSCUBE 2.2.x Legacy

AMS 3.00 Beta 1 vs AMS 2.52 Final

New Features

Added - Friendly URL

Added - Add POST NEW ARTICLE at admin menu (manage article) as per request from users

Added - Add POST NEW ARTICLE at main article page as per request from users

Added - Allow to upload ppt/powerpoint

Enhancement

Enhance - Support new XOOPS Editors and future XOOPS Editors by simply update AMS module

Enhance - Add default audience permission to all users

Enhance - Add default topic permission for approval (admin only) and submission (admin +

user)

Enhance - File upload (mime type) permission now can be changed in AMS administration preference instead of hard coded

Enhance - Update mime type detection to the latest list

Bug Fix

Fix Bug - Fix xoops editor selection disappear in XOOPS 2.3.x (only affect AMS v2.52)

Fix Bug - Remove unintended debug code (print "OK")

Fix Bug - sync tblcolor according to new tab count

Fix Bug - topic hyperlink disappear in breadcrumb when displaying storytopic (based on topic)

Fix Bug - fix error message occur caused by 0 article or 0 topic

Language change:

Added - define("_AMS_NW_POSTNEWARTICLE", "Post New Article")

Added - define("_AMS_MI_MIME_TYPES", "MIME Types");

AMS 2.52 Final vs AMS 2.42 Final

New Features

Added - Check latest version from server (admin->ams->about)

Added - Spotlight block (left/center/right) template can be choose.

Added - Spotlight template can be added straight into template folder and auto detected when install/upgrade

Added - Spotlight template can have additional php command (see example `ams_block_spotlight_ams_right`)

Added - Spotlight template can have preview. Just put into `XOOPS/modules/AMS/images/spotlight_preview`.

Added - ?????? support.

Added - FCKeditor, DHTML,HTMLArea,FCK,tinymce

Added - User can select their favourite editor at submit form

Added - Admin can choose to allow user to select their favourite editor or not

Enhancement

Enhance - Topic permission can be set in Topic Manager

Enhance - About page updated, and put at administration tab.

Enhance - replace some topic image with new image

Enhance - AMS now not depend on phpp/xoopsforge Frameworks anymore

Enhance - replace all deprecated function in xoops 2.3

Change - `ams_block_spotlight_xxxx.html` change to `ams_block_spotlight_ams_xxxx.html`

Enhance - some topic image replaced

Enhance - Republish & Expire date-time box now auto check/uncheck

Bug Fix

Fix Bug - Submit return blank page if didn't install framework from php/xoopsforge.com

Fix Bug - Topic name with an ' (apostrophe) in it, cannot change the weight of that Topic

Fix Bug - After edit, article will disappear for 10 minute

Fix Bug - Republish article didn't reset expiration date

Fix Security - Fix issue reported by trabis regarding potential sql injection in link.php

Fix Bug- AMS now TRULY not depend on [php/xoopsforge](http://php/xoopsforge.com) Frameworks anymore (cause blank screen at submit form)

Language change:

Added - define("_AMS_MI_EDITOR_DHTML","DHTML");

Added - define("_AMS_MI_EDITOR_HTMLAREA","HtmlArea Editor");

Added - define("_AMS_MI_EDITOR_FCK","FCK WYSIWYG Editor");

Added - define("_AMS_MI_EDITOR_TINYMCE","TinyMCE WYSIWYG Editor");

Added - define("_AMS_MI_EDITOR_USER_CHOICE", "Enable Editor Choice To User");

Added - define("_AMS_MI_EDITOR_USER_CHOICE_DESC", "Enable user to choose which editor they want");

Added - define("_AMS_MI_EDITOR_CHOICE", "Editor Choices");

Added - define("_AMS_MI_EDITOR_CHOICE_DESC", "Choices of editors enabled to user");

Added - define("_AMS_MI_SPOTLIGHT_TEMPLATE","Spotlight Templates");

Added - define("_AMS_MI_SPOTLIGHT_TEMPLATE_DESC","Which template enabled to admin to be used in spotlight block");

Added - define("_AMS_MI_ABOUT", "About")

Remove - define("_AMS_MB_SPOTLIGHT_TEMPLATE_CENTER", "Minis Below Main");

Remove - define("_AMS_MB_SPOTLIGHT_TEMPLATE_RIGHT", "Minis Left of Main");

Remove - define("_AMS_MB_SPOTLIGHT_TEMPLATE_LEFT", "Minis Right of Main");

Known Issues:

- Image Manager not working in KOIVI. Work around is... Press "Image Manager" -> CHECKED

"HTML" tickbox -> add image (from popup) -> UNCHECK "HTML" tickbox

- "Extended Text" WYSIWYG TinyMCE not working in PHP 4 environment. Its XOOPS Editor bugs, not AMS.
