**Description**

Content is a module that allows you to store content on pages in multilingual fashion. This means a story could have one id but depending on what language is being used by x-language the content allows for multiple languages to be specified per page. Without the endless [en]English[/en][no]Norwegian [/no].

It also has support for the tagging module for Xoops so you can have pages with tags in them (Plugin Provided). On top of this we also provide the plugin for sitemap module and several other files; the other files also include TCPDF for PDF Support, the Xoops editor fckEditor this is provided for legacy support on content.

It has sharethis codes for content as well as RSS contextual feeds for data on the content. The software is available in two licenses Single and Multisite installed licenses.

Price: \$49.95 USD

You can purchase this as an order download from <http://www.defense.io/cart.php>
