
Catads 1.53.3 RC1 - Modules

Posted by: Peekay

This update fixes category permissions which are now respected by RSS, blocks, searches and the Xoops user-profile. SEO is also improved with dynamically generated meta tags.

The search form now correctly requires a key-word entry to minimise server load and a number of other minor issues have been addressed. These include some missing icons and an admin display problem with IE.

Unfortunately, despite my best efforts the URL re-writing feature still refuses to work, although I have retained the option in this RC, just in case someone wants to debug it!.

Changes:

- Blocks, RSS, search and profile all respect category permissions.
- Meta description tag and keywords are now generated dynamically.
- Admin ad-listing now shows the latest ads first by default.

See changelog for bug-fixes.
