## Catads 1.53.4 RC2 - Modules

Posted by: Peekay

Posted on: : 2010/5/18 13:30:00

The main change is that sub-categories are now correctly grouped in the search screen and search block menus.

The display length of the title and description in listings can now be set as prefs, the selected currency is shown in admin and I have added CSS control for many of the page elements.

Because the CSS has changed a little, remember to clear your browser cache.

I think this is the most useable version up to date, but it is still an RC so please let me know if something doesn't work.

See changelog for bug-fixes.

Download from the 'Files' page at:
