Hi, "Lorem Ipsum Generator" from Runeher is useful module for all web designers. But now more useful 😃

I translate module to Czech language (module don't use language files) and added "nicer style" to option menu.

Why hack? Because this module don't use Language files but all text are "hard" in source code.

In to the Czech version I added Czech version of Lorem Ipsum, with diacritic and Czech like words. On English version are only original languages, but English speaking people don't need Czech like texts 😃

Download Czech version

Download English version

Happy Xoopsing 😁
