XOOPS 1.3.6 has been released.

This package includes numerous bug fixes that have been reported since 1.3.4/1.3.5 (formerly RC3.0.4/RC3.0.5). This does not mean that we are delaying the release of upcoming XOOPS 2.0.0, but it is to make the 1.3 series more stable, as most of people will still be using these versions for some more time.

If your having problems, please re-download the upgrade and reninstall. We found a couple of bugs that are hopefully fixed.

To upgrade, it is as simple as just replacing (or overwriting) the old files with the new ones included.

For more detail information, please see the changelog included in the package.
