- Unforgettable a Module Index Page;
- All Icons in One Style;
- Absolutely FREE.

What is CakePHP?

[CakePHP](#) is a rapid development framework for PHP that provides an extensible architecture for developing, maintaining, and deploying applications. Using commonly known design patterns like MVC and ORM within the convention over configuration paradigm, CakePHP reduces development costs and helps developers write less code.

What is SimpleTest?

The heart of [SimpleTest](#) is a testing framework built around test case classes. These are written as extensions of base test case classes, each extended with methods that actually contain test code.
