

Aquariophilie Portail - YAXS

NEWS\_PDF\_AUTHOR: aquaportail

NEWS\_PDF\_DATE: 2010/12/17 19:24:37

I'm proud to present my french [aquariophilie](#) website (aquarist). It's based on an old Xoops version 2.0.1x with major modifications and enhancements.

A full url-rewriting had been integrated with hard coding, with an fine H1, meta description and page title for each page with the specific canonical url (meta canonical) in a lot of pages to avoid duplicate content.

Some new modules were developped to get new fonctionnalities, like the [species guide](#) [AquaBDD](#) or some easy listings like this [public aquariums](#) (try to change the order with postal code, town, ...).

Aquaportail use many modules : newbb, news, smartsection, wordbook (totally change a lot of things), wf-links, ...

In wordbook and the species guide, JQuery Autocomplete suggests some results and accelerates access to data.

If you get any question, don't hesitate.
