Hi!

After a bit of time and for some requests that I have done, I expanded the module to display maps of the earth with the latest updated version of Google Earth Web v1.25, have added some functions and a search field. Others will be added later.

- Search Field for all sites
- Deleted file permission.php "unnecessary"
- Textbox for Keywords search engine
- 2 Textbox for width and Height of earth map

Demo: <http://www.txmodxoops.org/tx/modules/gearth/>

Download: [here](#)

I hope I have done something pleasing.
