Sightings 1.95

Categorised ad Plotted Video Embeddment

[Sponsored by the Extraterrestrial Embassy](#)

Sightings is a XOOPS module which allows for your users to input sightings of sometype with video, tags and description based on the world map in longitude and latitude. You may have to increase your php memory limit to install this as the SQL file is 176Mbs which means you will have to increase it above this for the installation to run successfully.

This module was developed for [ETE](#) and can be used on your site for collecting longitude and latitude on embedded vision.
