Webcams 1.15

Webcam chat rooms with free, group and private chat!

Sponsored by iStreaming.com

This was a module I formed over a few days it is a remake of the busines example from eSensual Networks which is in the process of rebadging to iStreaming Networks. Webcams allows you to have multisessioned chat rooms with assistence of application software and the hardware data farm provided by iStreaming Networks. You can have free, group and private timed rooms with costage of individual basis. Complete with user pivoting and management of the userbase, this module takes full implementation of the iStreaming API and facilities.

Currently there is payment options with this module, it is freely distrubuted and you can get test accounts from the company providing the server bandwidth and hardware. We have developed this in conjunction with David from iStreaming which means he has also requested an xPayment option as well which will be looked into over the next number of months.

iStreaming offer a managed backend service for websites that want to provide for their members a high quality broadcast style video chat. Free and pay per minute rooms are supported.

iStreaming service attaches to your existing website via a customizable video chat Player we provide. You can use Flash H264 video and Speex/MP3/HE-AAC audio or Windows Media video and audio.

All billing for your members is done on your website using your merchant account. Our secure gateway API allows you to update, create, and query member information in our database.
