Garage Module from France - Modules

NEWS_PDF_AUTHOR: Mamba

NEWS_PDF_DATE: 2011/4/4 14:00:00

Many of you were asking for a Garage module, and it seems like your wishes have been addressed by **Philou** from France, our October 2010 XOOPSer of the Month

He designed this module for a family member, but is sharing now with the XOOPS Community.

This module was developed for use in an automotive garage.
It could of course be adapted to manage a business of any kind with after sales service.

It was developed on XOOPS 2.4 and tests on XOOPS 2.5 are not yet finished.

The modules is addressing the need for having a tool for tracking repairs at a garage. Two different areas: mechanical and bodywork, and several workers in each area.

The module can manage maintenance of cars in the garage, follow the on-going and completed repairs, edit quotes and invoices.

A PDF file of documentation in French is available within the module's archive.

It is also accessible directly from this link

The module is available HERE
