As a recent Mac convert like many others out there coming from the Windows world, we often have trouble finding the right server software that was so easy to find for Windows or Linux. I ran across a site today that many of you may or may not know of called Aaronfaby.com. Prior to finding this site, I had to compile most things by hand for PHP and modules.

The guy from this site has take the time to create pre-compiled binaries for many Windows/Linux equivilent server software including Apache2, PHP 4.30, Perl 5.8, Postgres SQL, MySQL, etc... Have fun and a happy new year!

As a recent Mac convert like many others out there coming from the Windows world, we often have trouble finding the right server software that was so easy to find for Windows or Linux. I ran across a site today that many of you may or may not know of called [Aaronfaby.com](). Prior to finding this site, I had to compile most things by hand for PHP and modules.

The guy from this site has take the time to create pre-compiled binaries for many Windows/Linux equivilent server software including Apache2, PHP 4.30, Perl 5.8, Postgres SQL, MySQL, etc... Have fun and a happy new year!
