

x-vboard V0.1 : some kind of a shoutbox without typing! - Modules

NEWS_PDF_AUTHOR: kitsou

NEWS_PDF_DATE: 2003/1/6 11:47:48

After last month's release of x-vmail, the xoops module for voice emails, the time has come to release x-vboard. As the name says, it is some kind of a vocal-board, a little bit like the shoutbox module but without typing.

Here are some features of the x-vboard module:

- users can instantly record and listen to a server based pool of vocal messages even with a low bandwidth modem connection
- listen to existing voice messages, listed in a pulldown list, sorted chronologically
- shows the username of the voice message, subject-titel, date and time.
- instant playback of the message, streamed from server, using a tiny applet of <http://www.vimas.com>, coded specially for xoops. (Thanks to Sergey at Vimas Technologies, <http://www.vimas.com>)
- Pop-up recording window, acoustic preview, send to server, listen from server, status line.
- Excellent audio quality for voice messages, voice compression to 4800bps (36K per minute)
- demo applet of <http://www.vimas.com> limits the recording time per message to 20 sec. The licensed applet's recording time per message can be set in accordance with your own preferences.

You may test this module [here](#)

and download it [there](#)
