

FmContent version 1.05 Final - Modules

NEWS_PDF_AUTHOR: voltan

NEWS_PDF_DATE: 2011/6/8 15:50:00

After 5 month development , first stable version of FmContent ready for use.

fmContent is a module based on Content module by forMuss, and we've added several new options in this module. You can build static and daynamic pages with this module.

Don't forget that this module is mainly for small websites. If you need a module to handle many pages perhaps other modules like News or Publisher will be better for you.

For download and test this version you can use [this link](#)

And big thanks to ianez for rebuild templates and adding new options in module and blocks and other big thanks to Mamba for help in test and other help
