Xortify - 2.50

Fortify your XOOPS against spammers, hackers and harvestors.

Xortify is a network security drone that uses Web 2.0 techniques to link between your XOOPS installs and other via a Server Cloud. This will prevent security intrusions to your xoops with accurate deceptive notation of the intruder and prevent any farmed attacks. It is an accessory and required Protector to be installed an running to be part of the hookup. Otherwise it will run without protector just make sure you deselect protector as a provider.

It will display a template if you are banned and is an accessory to protector or any other firewall technology. The site itself is driven from <http://xortify.chronolabs.coop> and mirrored at <http://www.xortify.com> .. Cloud computing is web 2.0/3.0 stuff it used a SOAP or JSON, XML or Serialisation to exchange on the API backend to work, this will eventually be included in xoops as a support class.

A cloud computing process is one which staggers multiple networks sometime and mainly unknown to the webmaster into a network or cloud of data. In this example it is IP and Netaddy names to control access lists.

This will prevent predators from exposing your network to lag and other attacks from link farming, often this means many xoops are attacked in occasions which is all the time caught by protector, this way if an attack is in process across a large spectrum of links, your site will down itself to your sourced attack even if it is discovered on a completely unaffiliated site that is link farmed to yours or on a XOOPS User list.

Xortify is a cloud solution to protectors Bad IPs, if someone attempts to hack your site and becomes a bad IP it will then send the IP to the Ban Cloud on Xortify.com and its paired cloud Xortify.chronolabs.coop. It will also poll the server to make sure it has the latest ban list so your website will be aware of malusers before they attack through farming IP from services like

Google or bing.

Xortify with the IP Cache has had a dramatic improvement of performance, it only now polls an individual once maybe twice by default every 24 hours, you can adjust this by changing the IP Cache Time.

Whats New in this Feature

- IP Information Cache Timer

Whats New in this feature

- Provider Plugins
- Admin Usage Log
- Protector Module Provider
- Project Honeypot Provider
- Stop Forum Spam Provider
- Spider Module Provide
- XML Polling Protocol
- Serialisation API Protocol
- JSON API Protocol
- SOAP API Protocol
- Anti Spamming with User Signupl
- Anti Harvesting
- Serialisation API Protocol

Bugs Fixed

- Try Exceptions added to API Calls
- cURL Classes - Warnings & Notices
- Xortify Provider - Warnings & Notices
- Project Honeypot Provider - Warnings & Notices
- Stop Forum Spam Provider - Warnings & Notices
- cURL Polling
- Protector provider
- Xortify Provider
- cvalue not a global
- Header being sent by providers
- Project Honey Pot Cache Timer
- Signup not displaying on preference link
