With a great pride I am happy to announce a new XOOPS module within our family: [MyGalleries 3.0](#). This is the adaptation and improvement of our former module "Gallery System" designed for EXM.

[MyGalleries](#) has numerous features that allow you to post and manage pictures, or any other image, simply and professionally. Integrated with [Common Utilities 2](#), which gives all the features of using this system.

Some of the features that account:

- Management of albums.
- Resizing images.
- Various image formats and sizes depending on the type of browse made by the user.
- Integrated search engine.
- Integration with Lightbox plugin for Common Utilities.
- E-Cards.
- User permissions and disk quota allocation for images publication.
- Images tags.
- Front control panel for users
- Lightbox integration (requires [lightbox plugin](#))
- Bookmarks
- Albums
- Ajax uploader
- and many others...
- URLs rewriting

MyGalleries is currently in Beta status, so we will appreciate any bugs report that you locate in the module.

Requirements:

- PHP 5
- XOOPS2.5 or higher
- [Common Utilities 2](#)
- Optionally requires [Lightbox plugin](#) for quick preview images.
