

APCal v.2.0.0 Beta - Calendar with Maps for Xoops 2.4/2.5 - Modules

NEWS_PDF_AUTHOR: Dedale

NEWS_PDF_DATE: 2011/10/28 19:27:08

APCal v2.0.0 Beta module will let you show an events calendar with maps on your website. Other interesting features have been added, most are optional. This module is based on PiCal.

It will automatically copy your DATA from piCal for an easy transition.

This is a major step forward from APCal v 1.0.6

Visit <http://xoops.antiquespromotion.ca> to download it!

NEW FEATURES:

- Monthly view with linear view for one event (instead of repeating over and over)
- Thumbnail pictures with viewer in event view.
- Separate field for website and e-mail.
- Each category have its own color.
- Legend of categories with categories colors.
- More neutral colors for theme images, should be a better fit with most website.
- Reorganisation of admin preferences.
- Tell a friend feature.
- New sharing buttons (LinkedIn and Delicious).
- Option : Add pictures to an event including a separated main picture.
- Option : Main picture display in Monthly View (on mouse over), List View, Daily View and Weekly View.
- Option : Choose which category will be used for an event (as we keep multi-category feature).
- Option : Choose different hours for the same event (if multiple days are selected).

Please reports all problems quickly for this new version on xoops.antiquespromotion.ca or here. We will try to have a RC version within a week.

Original Features:

- Option : map showing all events location.
- Markers with number representing the date of event with next event first.
- Option : individual map showing event location.
- Optimised for Google (Title and Description).
- Option : display title of categories in H1
- Possible to add a description in HTML for each categories.
- Option : API that allows webmasters to show easily your calendar on their website (linking

back to your site).

- Improved customizable theme.
 - Option : navigation menu to see previous and next event
 - Option : bigger columns for chosen days.
 - Option : display the share this calendar link.
 - Option : perpetual holidays for USA (En), Canada (En), Quebec (Fr), France (Fr).
 - Option : URL Rewrite if allowed by server
-
- 4 Different views (Daily, Weekly, Monthly, Yearly).
 - Users can add events if permission is granted.
 - Export to ICS format.
