Homepage of your site v1.2

A new test for creating a personalized homepage directly from the System Administration. This new version allows you to store images and text in the database for display on the homepage. Ability to enable and disable options for editors such as HTML, smiley, xcodes, images, break, and various editors to manage content in different parts of the homepage.

Create a table so the homepage, find the sql file attached to the zip package, make a backup of the affected files and then overwrite them.

Download the package from [here](#)
