

Common Utilities 2.1.43 beta 3 released! - Modules

NEWS_PDF_AUTHOR: bitcero

NEWS_PDF_DATE: 2012/1/14 21:15:53

Common Utilities 2.1.43 beta is available for download!. In fact it has been available to download from [our site](#) for several days, however we have dedicated this time to test its functionality in a production environment to verify that everything works properly.

This release includes fixes to problems reported so far, but since [version 2.1.40](#) have been very few reports.

We have also made ??the following changes:

- User Manager enabled.
- New Block Manager. It allows better management of the blocks and creating custom positions. Now you can add blocks anywhere in your theme with just create a position and enable it to smarty. It is also fully compatible with XOOPS block system.
- Fixed a problem that arose with the jQuery plugin for cookies. Because some servers file name recognized him as a threat.

Common Utilities can be downloaded from the [microsite](#).

Note: We've also updated our other modules, it is recommended to download the new versions. You can do it from [this link](#).
