Xoops Html Classes v1.1 - Hacks

NEWS_PDF_AUTHOR: timgno

NEWS_PDF_DATE: 2012/1/19 18:10:00

In the previous version, I included only three classes in the package, it will include 19 excluding of course the form tag we already use with classes xoopsform. It can then use these classes directly in xoops since I added the needed files from libraries that attract the same classes in the core.

xoopshtmlloader.php
xoopsload.php

It 's always recommended to test in locally, using a virtual server like WampServer, in tutorials, in the same section explains how to integrate them in our files for xoops.

In the class/xoopshtml folder, are included these class files:

xoopshtmlanchor.php
xoopshtmlanchoredlistitem.php
xoopshtmlblock.php
xoopshtmlbookmark.php
xoopshtmlcomment.php
xoopshtmlelement.php
xoopshtmlheader.php
xoopshtmlimage.php
xoopshtmlimageanchor.php
xoopshtmllist.php
xoopshtmllistitem.php
xoopshtmlpage.php
xoopshtmlparagraph.php
xoopshtmlspan.php
xoopshtmltable.php
xoopshtmltablecaption.php
xoopshtmltablecell.php
xoopshtmltableheadercell.php
xoopshtmltablerow.php

It is considering whether it was necessary to include other classes, as more and more, than mentioned above, the html tags.
