

New Module Twitter Beta 1 - Modules

NEWS_PDF_AUTHOR: timgno

NEWS_PDF_DATE: 2012/3/5 22:45:13

After a brief tutorial on streaming data of the users of twitter, I created this module so as to have a sorted list of images, title and text of the tweet that friends sent in real time on our site.

This beta 1 is very light but can be changed at will using the css style file, included in the css folder of the module.

The research has a limited number of queries to the search so as not to block the servers too.

After this version will probably be another one that also provides for the registration, login, and the creation of applications using a special form directly from the module.
