xThCreator Module v1.01 beta for testing - Modules

NEWS_PDF_AUTHOR: timgno

NEWS_PDF_DATE: 2012/3/23 6:46:18

Only for testing

After a long meditation for creation of a module to create themes quickly, here comes xThCreator, a first beta version which produces, after a few data administration, our theme very easily. A version that should be the prelude to another version that promises something interesting in the facilitation and customization of our themes for xoops.

A module to create the basic theme with tinymce editor automatically by including the html tags in the document or layout. The necessary files can be modified at will. This is only a beta version that will be developed to better manage the code directly into the editor administration.

Folders created automatically:
- **css**
- **docs**
- **icons**
- **img**
- **language**
- **modules**
- **tpl**

These folders contain other folders and files that you can use freely.
