Songlist 1.11 - Hyme or Karaoki Song List

Songlist allows you to place songs with associations of category, artists, genre & album into a database. It then allows for them to be searched on and voted for purposes like a karioki list. Songs based on a XML File can be imported. This is ideal for anyone wanting to compile a list of song, of course the module can be modified to make other modules and was written for an anonymous doner from <http://www.xoopsviet.org>

Complete with browse by character and search, song list allows for a paginated display of songs, albums or artists which have been either manually or through and XML File imported. Perfect for anyone wanting to maitain a karioki play list.

Some Features Include

- Adjustable Memory and Time limites for large data masses
- Categories with Child relationship
- Artists List with Song Association
- Albums with Artists and Song association
- Genre with song association
- Singing Type (Solo/Duet)
- Song Request email and notification
- Search based on Song Title or Lyrics
- HTACCESS Seo
- Blue room

Bugs Fixed

- SEO Fixed
- Warnings & Notices
- User Pagination
- Database Optimization and Indicies
- Code Bottle Necks
- Templating Issues
- Import Feature & Limiter
