After XOOPS was selected over several other competing CMS solutions to power the new Website of the [Libyan Ministry of Defense](#), another high profile institution in Libya has selected XOOPS - this time the [Libyan High National Elections Commission](#)!

<http://www.hnec.ly/>

As in the previous case, they felt that XOOPS provides the best combination of features, security, and support. They also liked the modular approach of XOOPS, and the ease of adding new functionality by installing additional modules. And they felt that with the continues development of new XOOPS versions, there is a guarantee that XOOPS will be around for a long time.

As in previous case, it is thanks to the hard work of Mowaffaq and his team from www.arabxoops.com, who were able to successfully demonstrate the value of XOOPS, and address all the questions from the technical stuff of the High National Elections Commission.

We are very proud that XOOPS has been selected by national, state, and local governments around the world, like State of Parana in Brazil (<http://www.cidadao.pr.gov.br/>) or Tainan County in Taiwan.

Viva XOOPS! 🏆
