

JQuery UI datepicker - Hacks

NEWS_PDF_AUTHOR: timgno

NEWS_PDF_DATE: 2012/6/28 12:48:23

Some time ago on my site, we talked about inserting a plugin [datetimepicker](#) that you can insert into a class on xoops. In this news I announce that I have created a special class in the folder class/xoopsform as formdatepicker.php. The result is being able to delete many files from the old calendar, and use a simple method call using the id #datepicker and using the datepicker plugin of jquery datepicker.js

A simple example shows images:

will receive the form by clicking on the icon to the right of the text field, if the icon is activated, or just click in the text field to display the calendar ui jquery.
