Songlist 1.13 - *Karaoke/Hymn Song list module*
Community Release by caraok.net

Demo: <http://xoops.demo.si-m-on.com>

Download:

http://code.google.com/p/chronolabs/downloads/detail?name=xoops2.5_songlist_1.13.zip - 282Kb

Songlist allows you to place songs with associations of category, artists, genre & album into a database. It then allows for them to be searched on and voted for purposes like a karioki list. Songs based on a XML File can be imported. This is ideal for anyone wanting to compile a list of song, of course the module can be modified to make other modules and was written for an anonymous doner from <http://www.xoopsviet.org>

Complete with browse by character and search, song list allows for a paginated display of songs, albums or artists which have been either manually or through and XML File imported. Perfect for anyone wanting to maitain a karioki play list.

Some Features Include

- Adjustable Memory and Time limites for large data masses
- Categories with Child relationship
- Artists List with Song Association
- Albums with Artists and Song association
- Genre with song association
- Singing Type (Solo/Duet)
- Song Request email and notification
- Search based on Song Title or Lyrics
- HTACCESS Seo
- Blue room

Installation

Download the lastest version from Chronolabs on Google code or off sourceforge. Unzip the archive you should have a folder called 'htdocs' in the unzipped location. Copy the contents of 'htdocs' folder to your CMS root path this is generally a folder called 'public_html' or 'www' on your FTP service of your website. Log into your CMS and goto the modules/applications

installation section, this is generally in your system control area under modules. Click on the icon that represent installing the module. If all has behaved as need be then your module is installed. If your module requires a user licences, keys or a username then sign-up to the appropriate sites and retrieve your keys or IDs (Links should be provided in the preferences) and paste the values into preferences. Now your right to go!

Upgrading

Download the lastest version from Chronolabs on Google code or off sourceforge. Unzip the archive you should have a folder called 'htdocs' in the unzipped location. Copy the contents of 'htdocs' folder to your CMS root path this is generally a folder called 'public_html' or 'www' on your FTP service of your website. Log into your CMS and goto the modules/applications installation section, this is generally in your system control area under modules. Click on the icon that represent upgrading the module. Your version number should no longer be in bold and would have changed!
