NEWS_PDF_DATE: 2012/8/23 15:28:59

We are very happy to announce that XOOPS will be presenting at the **Codeworks PHP Conference**.

Codeworks, is an annual one-day conference tour, bringing a full day of learning, fun, and networking opportunities to a city near you! Like every year, they're visiting ten cities on this year's tour, with some familiar stops and some new venues added to our roster.

We'll be presenting on September 29th in Cincinnati, OH.

The topic is "**OOP Adventures with XOOPS**", and this is the short description of the presentation:

Quote:

> The recent Project of the Month on SourceForge, XOOPS was designed from the very beginning as an object-oriented CMS, which is even reflected in its name: eXtensible Object Oriented Portal System. Michael will present the OOP oriented architecture of XOOPS, and show how OOP makes development of XOOPS modules easy and fun, promotes reuse of code, and keeping GUI consistent across all modules.

This is the first time that XOOPS makes a presentation at a PHP conference in the USA, so we're very excited about it.

With the recent Project of the Month on SourceForge Award, and the release of XOOPS 2.6.0 Alpha 1 by the Core Team, it seems like XOOPS is nicely moving forward!

Viva XOOPS! 😬
