FBComment 1.0 RC Available - Modules

Easy XOOPS Integration of Facebook Social Plugins

NEWS_PDF_AUTHOR: geekwright

NEWS_PDF_DATE: 2013/1/4 3:36:03

geekwright is proud to announce the availability of a release candidate of FBComment 1.0.

FBComment is a module for XOOPS systems that provides easy access to Facebook(R) social plugins for both Like Buttons and Comments. This functionality is provided through standard XOOPS blocks which can be added to virtually any page. In this way, page specific comments can be added quickly without requiring any changes to module templates. Open Graph meta tags are automatically added to pages where the blocks are used, and additional page specific data can be easily specified using the built in Open Graph meta data editor.
