

SimpleNewsletter: easy newsletters management for XOOPS - Modules

NEWS_PDF_AUTHOR: Mamba

NEWS_PDF_DATE: 2013/1/15 2:40:00

In 2008 Hervet released a commercial module to manage newsletters on your XOOPS site:
SimpleNewsletter

Recently, he was asked by SMEDrieben to release it as OpenSource, and he agreed to it.
Thank you Hervet for doing it!

SimpleNewsletter allows you to easily create and send newsletters (in text or in html) to the registered users of your site (whatever their number is) and it will enable them to read the past issues from your site.

Main features of the SimpleNewsletter module:

Unlike other newsletters modules, it is capable of sending large numbers of the same newsletter to your users through one of its blocks or via a CRON (a kind a planified task).

In its administrative part, the module allows you to create as many newsletters as you want, to stop and to resume shipments, to edit and remove newsletters, to manage subscriptions (adding or removing members, adding all Members of the site), to manage the content of a welcome and goodbye email when users unsubscribe. You can also manage the welcome of the index page.

On the user side, the module can show a list of the previous newsletters and to view the content of each one.

The module is integrated to the Xoops search, it has an RSS feed and has 4 blocks :

- The list of the last subscribers
- The last newsletters
- A block allowing each user to know his state (subscribed or not)
- A dedicated bloc to send newsletters if you don't have a CRON.

It has been now updated to XOOPS 2.5.5 Admin GUI and released as Beta 1

Download: [SourceForge Module Repository](#)

Developers wanted:

With this module, we have now several Newsletter modules, and it would be great to have a team that would merge the best features from all of them, and create one that would be

supported centrally. If anybody would like to work on it, please let us know.

Bugs/Feedback: Please post in [this thread on our Forums](#)
