

SmartClone 1.10 Beta 1 and cloning of XOOPS Modules - Modules

NEWS_PDF_AUTHOR: Mamba

NEWS_PDF_DATE: 2013/3/23 23:10:30

SmartClone is a module that will clone with 2 clicks any module that is developed as clonable! It works with a plugin system so any module developer can create a plugin for its module and allow SmartClone to painlessly clone it!

There are certain requirements for a module to be clonable, among them - a consistent way of naming tables, language variables, etc. We'll have soon a guidelines on how to make your module "clonable".

As a test, you can clone, for example, the [WF-Downloads 3.22 RC1](#), or some of the Smart modules, like the [SmartFAQ](#).

As a matter of fact, I used SmartClone just recently to clone WF-Downloads into a "Repository" module, that is being now used on [XOOPS Website](#) (see [this thread](#))

The goal is to have the most important XOOPS modules that are part of the Module Packs, clonable. We probably will have some kind of voting on this, and use some logic to decide which ones are the best for cloning.

Download: [SourceForge File Repository](#)

Please help us with testing of this module.

Please discuss the module and module cloning in [this thread](#)
