SourceForge has recently announced creation of a directory for "Enterprise-Ready Open Source Projects", or **"Enterprise Directory"**. These are the projects that are geared specifically for use within a company. This might include areas such as project management, office suites, or customer relationship management (CRM) software, and of course CMS.

The SourceForge Enterprise Directory is the authoritative destination for researching and downloading Enterprise-Ready projects. It allows for rich community interaction on Open Source titles through the new reviews and ratings system, and enables direct reach to the developers of these titles.

We are very proud to announce that XOOPS has been added to this directory!

This is a clear testimony to the quality of XOOPS and the hard work of the XOOPS community!

The inclusion in the Enterprise Directory is reflected now in the new look of XOOPS on SourceForge, which will appear only on select Enterprise-Ready projects:

Viva XOOPS! 😁
