

gwiki 1.0 beta - Modules

A flexible wiki for XOOPS

NEWS\_PDF\_AUTHOR: geekwright

NEWS\_PDF\_DATE: 2013/5/17 16:12:35

**gwiki**, the geekwright wiki, is a XOOPS module which implements a wiki based on the [WikiCreole 1.0](#) specification. In addition to the basics as defined in the WikiCreole spec, the wiki features several powerful extensions, giving it great flexibility as a content authoring and presentation tool. It also features an equally flexible permission capability, making a single instance suitable for multiple collaborative efforts, each with their own policies.

Documentation is supplied as wiki pages which can be optionally loaded into the wiki by the module administrator, or you can view the manual online [here](#).

#### **This is a Beta version**

Although nearing release, this is still a work in progress.

Download is [available here](#).

Feedback and suggestions are always welcome.
