

gwiki 1.0 beta - Modules

A flexible wiki for XOOPS

NEWS_PDF_AUTHOR: geekwright

NEWS_PDF_DATE: 2013/5/17 16:12:35

gwiki, the geekwright wiki, is a XOOPS module which implements a wiki based on the [WikiCreole 1.0](#) specification. In addition to the basics as defined in the WikiCreole spec, the wiki features several powerful extensions, giving it great flexibility as a content authoring and presentation tool. It also features an equally flexible permission capability, making a single instance suitable for multiple collaborative efforts, each with their own policies.

Documentation is supplied as wiki pages which can be optionally loaded into the wiki by the module administrator, or you can view the manual online [here](#).

This is a Beta version

Although nearing release, this is still a work in progress.

Download is [available here](#).

Feedback and suggestions are always welcome.
