

UHQ_GeoLocate v0.94 Released! - Modules

First update since 2010!

NEWS_PDF_AUTHOR: iunderwood

NEWS_PDF_DATE: 2013/6/28 18:44:49

It's been about 2 1/2 years since I've really done much with this module, and since a friend of mine has been prodding me into getting some coding going again, I thought this would be a good module to do a few updates to. What's changed?

Release 0.94 :: June 15, 2013

Feature Adds

Ability to cache IPv6 queries w/ API calls.
MaxMind GeoIP API now supports IPv6 queries.
IPinfoDB v3 API now supports IPv6 queries.

Code Changes

Converted to XOOPS 2.5.5 Admin GUI (Mamba)
Further optimization of the geolocate.class, code collapses.

Notes

Change log also in text format, since it's supported in the Admin GUI.
Development environment is now XOOPS 2.5.6.

Release 0.93 :: June 11, 2013

Feature Adds

Added ability to expire cached entries after an arbitrary number of days.
Added IPInfoDB v3 API support w/ city and country-level lookups (IPv4).
Added FreeGeoIP.net support (IPv4).

Code Changes

Minor code cleanups and optimizations.
Removes distribution sample binary files if the module is already installed.

Fixes

Fixed module upgrade script for v0.91 upgrades.

Notes

The code repository for the module is now hosted on GitHub under `uhq_geolocate` for anyone who is interested. Additionally, the module strings now note the underscore in the module name.

Downloadable here:
