Inception 2.0: free premium theme for XOOPS - Themes

NEWS_PDF_AUTHOR: bitcero

NEWS_PDF_DATE: 2014/12/13 6:30:00

I am pleased to announce the availability of the new version of Inception, a theme for XOOPS with premium quality, but totally free.

A long time ago I published this theme for the first time at the site of XOOPS and became very popular almost immediately. Now after a long time, public order version 2.0, an update necessary and improving the overall quality of the item.

Theme Features

Inception take advantage of the possibilities offered by xThemes (though not all) to provide a highly customizable theme for multipurpose use. Among the main features of the theme are:

- An innovative design with a stunning cover.
- Control Panel to configure every detail of the theme as colors, fonts, sliders, content, footer, etc.
- Integrated with MyWords.
- Two customizable menus: top and main navigation.
- Multilanguage Support and easily translatable using PoEdit.

Thanks to these features, and because it uses xThemes as base, with Inception you can create your own style, adapting the colors and fonts to your liking, and specifying the type of background you want. Actually, the limit is in you.

Requirements

Inception requires the installation of certain components to function properly:

- [Common Utilities 2.2](#) or higher
- [xThemes 1.6](#) or higher
- [MyWords 2.2](#) or higher

Remember that each module has its own requirements to function properly.

[Download Inception 2.0](#) [View Demo](#)

Problems? Help?

If you find any error in the subject I invite you to report it to the repository of the topic, using [the tool that provides GitHub for this purpose](#).
