I am happy to introduce a new CPanel (Admin) theme for XOOPS, completely rewritten with Bootstrap, in order to provide visibility and compatibility with different mobile devices.

It is important to stress that unfortunately, with versions of XOOPS 2.5.x that support Bootstrap, this Admin theme may not work properly. Therefore this Beta version should be tested first locally, before using it in a production site.

I have changed many file in the System module, in addition to many other Core files, so it is necessary to do the tests on a fresh installation of XOOPS on your localhost, because if there is incompatibility with this new code, you're not risking anything.

However, even the Default theme will be changed, to avoid any problems.

This below is a screenshot of the theme that can be modified in various colors just like the default theme.

Libraries used:

- bootstrap.css 3.3.2
- bootstrap.theme.css 3.3.2
- bootstrap.min.js 3.3.2
- jquery.min.js 1.11.2
- jquery-ui.min.js 1.10.4

As I wrote in this thread for some problems, you might find difficulty with some features.

I must point out that in the package there are other themes, in addition to the default, but they are not complete like this one. You can still edit them to your liking in the expectation that we can use in production.
