

Beortho.com with new theme based on Ethernial - YAXS

NEWS_PDF_AUTHOR: bitcero

NEWS_PDF_DATE: 2015/3/31 5:11:50

A new theme, based on [Ethernial](#) has been created for [beortho.com](#) by [Eduardo Cortés](#). The new theme includes full integration with [Formulize](#), a module designed for forms creation and reports on the web.

Another relevant feature of this new site, is a **new Landing Page** for [QuickPages](#) that is used as home page. This landing page has two different layouts: one for anonymous users and another for registered users. The biggest challenge for this project was the integration with formulize, because this module has all presentation code (HTML) hard coded in PHP files, however the results are satisfactory. **In words of François, Webmaster of beortho.com:**

I had a big project: to redesign my website with some particular needs, like changing the UX for an awesome module called Formulize. For that job I didn't only need a web designer, I needed also experience in php and javascript. Because I've already worked 2 years ago with Eduardo (bitcer0), I knew what he can do with rmcommon, and how he changed my UX with xoops. One month later he has built a beautiful design (as always) and he gave a powerful new way to use this module, without hardcoding. That's just unbelievable. Thank you, really.

— FRANÇOIS.

Webmaster of eorthodontie.com

Used modules: - [Common Utilities](#) - [xThemes](#) - [QuickPages](#) - [Formulize](#) You can visit [this web site here](#). Also you can view the item in [my portfolio](#).
