
UHQ GeoLocate v0.96 released! - Modules

Posted by: iunderwood

Posted on: : 2015/7/1 7:43:01

It's been another couple of years since the module has been updated. There are a few tweaks in here that now set the minimum version to XOOPS 2.5.7.

Functionally, this should be ready for a production implementation. There are some more administrative pieces I've got in my to-do list before I give it the big 1.0.

Direct downloads are [here](#).

Also, this project can be found on GitHub [here](#).

From the changelog:

====[0.96 -- 2015-06-16]====

Code Changes

- * Modified directory structure to really fit in GitHub. (Mamba)
- * IPInfoDB v2 APIs are depreciated and have been removed as options. Update scripts will change this accordingly.
- * Help section utilizes new help structure for 2.5.7+
- * Update script uses language localization in admin.php,
- * Update script now produces verbose notes for updates to v0.96.

Fixes

- * Removed redundant file check in update script.

Notes

- * Dev environment is now XOOPS 2.5.7.1

====[0.95 -- Not Released]====

Fixes

- * Fixed a couple rendering issues which would see an error condition.
- * Sub-branch adjusting to quirks in XOOPS 2.6.0 Alpha 2.
